

Ekofisk 2/4 Z milestone

30.10.2012

All deck sections are now in place in connection with the construction of Ekofisk 2/4 Z at Aker Solutions in Egersund. More than 900 workers marked the milestone in one of the workshop halls on 25 October.

Work on the Ekofisk 2/4 Z topsides started 9 March, and the topsides reached full size after 223 days. In addition, a 116-metre bridge has been delivered to connect the platform to the rest of the Ekofisk complex.

Modules in place

"All deck modules are now in place and we continue at full speed to install high-quality equipment," Construction and completion lead Robert Dahlsveen said.

In addition to the activities in Egersund, the project has deliveries from enterprises based in Oslo, Houston, Poland, Spain and Italy.

High activity level

On behalf of ConocoPhillips, Dahlsveen offered a big thank you for the effort so far, while reminding everyone that the coming winter will see even more people in action and an even higher activity level. The schedule compliance requirements will remain strict, also as regards delivering high-quality work and keeping safety in mind.
